EIS001641

Dear Ms. Dixon

- <sup>1</sup>  The atomic industries message to Congress is simple: "Come take out our toxic garbage, so we can continue to make more of it." ]
- <sup>2</sup>  It is estimated that there will be 70,000 shipments by truck. The projected routes would affect 43 states and 3/4 of the U.S. population.

NRC approved government guidelines in 1984: areas geological and ground water characteristics, earthquake activity, proximity to water supplies, national parks and population centers.

Yucca Mountain does not pass these guidelines as there are earthquake fault zones running through the repository site that may so limit the area of the dump that only a fraction of the high-level waste may fit there.]

2 cont.

- The fractured rock of the mountain will not retain the radioactive gases that will escape.]
- 3 [Yucca mountain is part of the Shoshone Nation lands.]
- 4 [Shipments by rail are more dangerous as there have been several catastrophic train accidents in the Cajon Pass in recent years.]

Sincerely,  
Mrs. Marian Soucy
